English, fluent
German, good

Profile

Engineer who likes the unglamorous parts of logistics software: the queues, the retries and the documents at the end of them. Ten years of Ruby, most of them with a pager.

Experience

Lead engineer · Harbour Logistics, Gothenburg

2022 – today

Leads a team of six building the routing platform that plans 40,000 deliveries a day.

- Moved route planning from a nightly batch to **live replanning**, cutting late deliveries by a third.
- Introduced contract tests between the eleven services the platform is made of.
- Mentors two engineers a year through the company's [graduate programme](#).

Software engineer · Northwind Freight, Malmö

2018 – 2022

Built the customer portal and the *proof of delivery* service, from the first commit to two million documents a month.

- Replaced a PDF service in Java with one in Ruby that renders in a tenth of the time.
- Ran the on-call rotation for the portal and wrote its runbooks.

Junior developer · Example Studio, Lund

2016 – 2018

Web shops and booking systems for small businesses in southern Sweden.

Education

MSc Computer Science · Lund University

2011 – 2016

Thesis on incremental layout of long documents, graded with distinction.
